

All Photos are of BMI Pond Remediation

Separation of free liquids from pond sludges for processing (above).

Separation of free liquids from pond sludges for processing (above).

The three pictures below show disking of the pond sludges to facilitate evaporation of bound water. These “wet” sludges are hygroscopic and will not dry in a reasonable time frame unless physically worked.

The five pictures below show the construction of the Corrective Action Management Unit (CAMU)...various phases.
